DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see page 8, filed August 24, 2006, with respect to claim 2 have been fully considered and are persuasive. The 112 rejection of claim 2 has been withdrawn.
2. Applicant's arguments with respect to claims 1-21 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Goss (2002/0185917) and Gill et al. (2004/0185413). Goss teaches a control interface (20) to interconnect an audio device (18) to a power source (12) and uses a timer (24) to control the operation of the audio device. He also teaches a power input connection (31, 38) comprising a power cord (32, 39, 34). He also teaches a plug/receptacle assembly (male plug - 41, female receptacle - 12) for connection in series between a power source (12) and a supply cord (34), and the supply cord is connected to the control interface (20). He also teaches that the audio device (18) could be a tape player, compact disk player, optical disk player, or audio-visual video disk player ([0006], [0029], and Fig. 2). Goss fails to teach a push-button switch to connect the power source to the audio device. Gill teaches a manual push-button switch (i.e. momentary contact switch) (40) that when pressed completes a circuit which allows power to be supplied to

a load (18) ([0046]). It would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate a manual push-button switch into the control interface of Goss' invention so that one could quickly and efficiently control the power supplied to the audio device without having to reprogram the timer or use a key.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
